

## Compact USB Vector Network Analyzer MS46122B

### Overview

#### Description

- World's first series of compact VNAs to 43.5 GHz for cost-effective measurements  
PC control takes advantage of external computer processing power and functionality
- Compact 1U high package for efficient use of bench and rack space
  - No on-board data storage eliminates the need for data purging in secure applications
  - Time domain with time gating option enables easier and faster fault identification
- A common GUI interface within the ShockLine family reduces switching costs between models
